

# Starting WES in Enhanced Case Review Mode

## Introduction

These steps describe starting Weather Event Simulator (WES) in its enhanced case review mode. This mode enables most of the D2D functionality without the overhead of displaced real-time processing.

If you have any questions about starting WES, see your local training officer.

The exact steps presented here are designed to be used with exercises that demonstrate D2D usage. These instructions apply to the WES Test Case (August 24, 2006).

Be aware that some applications of AWIPS do not function correctly in the WES case review mode. These include:

- WarnGen
- AvnFPS

## Start WES in Enhanced Case Review Mode

- In a command line (shell prompt) window, type  
`enhanced_case_review`

## Fill out the Case and Site Details

In the **Start D-2D** window that appears, make sure the entries match the information below:

- FXA\_DATA: `/data/awips/2006Aug24test`
- FXA\_LOCAL\_SITE: `ABR`

There is no need to check the "Start AWIPS Text Workstation Control".

Click the **OK** button when finished.

## Start D2D

- When the **About to Start D2D** window appears, click the **Start** button.
