

3 Back Up Any Pre-existing WES Installation

1. Log in as root.
2. `cd /awips`
3. Back up the fxa directory as root:

e.g. `cp -Rp fxa fxa.wes8.2`

Note: If you desire to restore the previous version, you will need to move the old version back as root. Root user is important here because the `/awips/fxa/DRT/bin/date` executable has to be owned by root with special privileges, and the default empty postgres database in `/awips/fxa/DRT/pgdata.tar.gz` has to be owned by user postgres.
